VALVE CONTROLLER

- Front-programmable
- mA, V, and Ω programmable input
- Ramp times, jump values, reversal, chopper frequency, and deadband
- 3-digit LED display shows I valve % value
- 1 or 2 channels
- Modulated current output for proportional valve

Applications:
Control and regulation of single- or double-coil hydraulic and pneumatic proportional valves. ● The unit is used for accurate oil flow regulation, linear soft acceleration and deceleration, modulated output signal, and programmable deadband. ● Is highly suitable for joystick regulation of A/B movements.

Technical characteristics:
The 2224 Valve Controller is a microprocessor-based unit containing ramp functions for soft start and stop and jump functions thus avoiding deadband at start and changes between A & B valves.
The user interface of the valve controller consists of three pushbuttons and a 3-digit LED display. By using these, output currents, ramp times, jump values, chopper frequency, reversal, deadband, and on/off functions are changed. During operation the display shows the present output signal as a % of the I valve.
All parameters are protected against unauthorised changes with a password.
Changes between A and B valves can be made in two ways. By way of function 1, the A valve is chosen when +Vsupply is applied to terminal 2. By way of function 2, changes between A/B valves take place automatically according to the value of the input signal (no signal on terminal 2).
The output current is enabled / disabled by a digital controlling signal. Please note that the output current is disconnected until +Vsupply is applied to terminal 3.

Input:
Programmable current or voltage input for standard signals acc. to order schedule, joystick / potentiometer or a special non-programmable input. Digital inputs for external control functions.

Output:
A pulsating current output prevents the connected valve from sticking. Optional programming of the modulation frequency (PWM) between 8 and 400 Hz. The internal measuring and control circuit ensures that the mean current never exceeds the entered I valve. If the peak current exceeds 7 A the output will be disabled.

Electrical specifications:

Specifications range:
(@: -20°C to +60°C)

Common specifications:

Supply voltage	12 or 24 VDC ±20%
Internal consumption	2 W / 24 V 1.8 W / 12 V
Communication	Front-programmable
Updating time	30 ms
Temperature coefficient	0.01%/°C
Linearity error	0.2%
EMC immunity influence	< 2% of span
Relative air humidity	< 95% RH (non-cond.)
Dimensions (HxWxD)	80.5 x 35.5 x 84.5 mm
Tightness	IP50
Weight	160 g

Input:

Current input	0/4...20 mA / 50 Ω + PTC (54 Ω)
Voltage input	0/0.2...1 V and 0/2...10 V / 10 MΩ
Potentiometer input	0...10 V or ±10 V / 10 kΩ
External potentiometer	1 kΩ ≤ potentiometer ≤ 10 kΩ
Control signals:	
Operation / shutdown	PNP / 2.2 kΩ, 12 / 24 V
$I_{max.1}$ & $I_{max.2}$	PNP / 2.2 kΩ, 12 / 24 V
A / B channel	PNP / 2.2 kΩ, 12 / 24 V
Deadband	0...99.9% of input span

Output:

Output voltage (max.)	Supply voltage - 0.5 V
Output current (max.)	3000 mA mean
Current peak	7 A
Output power (max.)	36 W
Reference voltage	10 VDC (A valve) ±10 VDC (A & B valve)
Ramp up & down	Time 0...10.0 s
PWM frequency	8...400 Hz in steps of 1 Hz

Observed authority requirements:	**Standard:**
EMC 89/336/EEC, Emission	EN 50 081-1, EN 50 081-2
Immunity	EN 50 082-2, EN 50 082-1
Emission and immunity	EN 61 326
